PDI TECHNOLOGIES

Trend Analysis over Time

PDI's data warehouse stores multiple years of information, enabling year-to-year, period-to-period, and multi-week analysis. The ability to identify trends that directly affect business means better decision-making and an increased bottom line.

Manage by Exception

PDI Enterprise Performance Reporting utilizes an alert system that applies business rules against incoming data and notifies management of potential issues.

You can monitor percent changes in sales from same-day-of-week averages, or cash as a percent of inside sales. Alerts help you focus on the problem areas, and take your business from a culture of constant reviewing to management by exception.
