Wi-Fi as a Service

Secure, managed Wi-Fi

Increasingly, businesses rely on fast, safe, reliable Wi-Fi connectivity for essential business processes and marketing opportunities. With technologies constantly evolving, Wi-Fi network setup and maintenance are more complex than ever. Operators who rely on self-managed Wi-Fi services leave themselves open to numerous vulnerabilities, including security weaknesses and unreliable service. Why take the risk?

PDI Wi-Fi as a Service is a fully managed system that provides stable, scalable, and secure Wi-Fi for your employees and customers, so you can stop worrying about Wi-Fi issues and focus on your business.

Consolidated Network Management

Multiple Wi-Fi Networks per Location

Family-Friendly Filtering

Proven Deployment Model

Virtually every aspect of high-performing, secure, PCI-compliant Wi-Fi in one end-to-end managed solution

Security and control

> PCI-compliant solution
> Rogue AP detection
> Anti-squatter rules
> Bandwidth throttling

Key benefits

As businesses grow, Wi-Fi technology demands scale with them, requiring more IT staff, training, and hardware. Managed Wi-Fi helps keep costs under control while improving stability, security, and service at all your locations.

Cost controls allow for greater scalability, so you can run your business more efficiently and focus on your strategic vision.

Wi-Fi as a Service replaces vulnerable consumer-grade Wi-Fi systems with best-in-class hardware, monitoring, and service, delivering a safe and reliable Wi-Fi experience for your customers and staff.
