# PDI XDR Active Directory (AD) Protection

## Strengthen your security foundation by protecting your most critical assets

Microsoft Azure Active Directory (AD) and on-premise ADs manage access to vital network resources. Protecting them is a business security cornerstone. Effective security protects credentials, applications, and data from malicious users and prevents damage to your network.

## Extend protection beyond the endpoints by monitoring potential malicious activity within the network core.

PDI XDR — Active Directory (AD) Protection monitors identity configurations and recognizes vulnerabilities and active threats to reveal actionable insights, so you can address risks. Reduce the threat of compromise and protect your most critical assets with state-of-the-art AD security.

| Active Monitoring by PDI | Risk Exposure and Mitigation | Credential Protection | Attack Identification and Response |
|---|---|---|---|

Average cost of an Active Directory breach: $6.3 million*

*Microsoft-commissioned study by Forrester Consulting
